Global Mobile Location Solution

Commercial Source Code Licensing & Custom Development Partnership

Opportunity Overview

We are offering a high-performance, field-tested mobile location tracking system, currently live on the Apple App Store. Designed with a global perspective and a strong focus on the **Asia-Pacific market**, this system is a ready-to-scale business solution for entrepreneurs and developers seeking a stable, revenue-generating platform.

Key Technical Advantages

- **Master-to-Multi-Sub-Device Architecture:** Seamlessly monitor multiple target devices from a single master console, ideal for professional fleet, family, or asset management.
- **Optimized Energy Efficiency:** Powered by our proprietary trajectory algorithm, ensuring industry-leading battery performance without compromising tracking precision.
- **IoT & Hardware Compatibility:** Built for extensibility, our platform natively supports secondary development and integration with microcontrollers (MCU), enabling deep hardware-software customization.
- **Cross-Platform Commitment:** While our iOS version is currently live and stable, **our Android version is currently in active development**. We guarantee full, synchronized updates for both platforms to ensure seamless continuity for your business.

Partnership Model

We provide **100% source code acquisition and full commercial licensing**. This is not just an app; it is a turnkey business model designed to help you generate stable, long-term profit in the rapidly growing location-tracking industry.

To align with varying technical capabilities, budget scales, and customization depths, we offer a modular, three-tiered delivery ecosystem:

Standard License (Lightweight): Tailored for tech-savvy entrepreneurs and developers with in-house technical capabilities. We provide clean source code and comprehensive documentation, empowering clients to deploy and re-develop independently for a cost-effective head start.

Standard Deployment & Branding (Medium-weight): Designed for growing businesses and startups without an in-house tech team. We deliver turnkey server deployment, brand VI customization (such as logos, theme colors, and system naming), and minor adjustments to quickly establish a branded product.

Deep Customization (Heavyweight): Built for mid-to-large enterprises with specific industry barriers and complex operational workflows. We provide tailored R&D services —ranging from requirement analysis and architecture design to proprietary feature development—meeting rigorous, scenario-specific business demands.

Infinite Multi-Scenario Scalability: Backed by a mature platform architecture, the solution rapidly empowers high-demand verticals such as pet anti-loss and fleet management, while effortlessly adapting to asset tracking, personnel positioning, and any other niche scenario.

Whether you are looking to launch a dedicated tracking service, integrate location capabilities into existing hardware products, or pivot into a new niche market, our solution provides the robust foundation you need to succeed.

We are seeking serious partners and entrepreneurs for long-term collaboration. If you are ready to scale, let’s discuss how we can accelerate your entry into the global market.
